

SYTGT003, 922nd SCUD regiment base

SCUD-TEL can be situated in their storage buildings or placed on the launch revetments prior to launching. TEL storage buildings are sheet metal buildings which offer little protection.

The SCUDs are fueled in the staging areas with IRFNA and Kerosene, both of which are needed for launch.

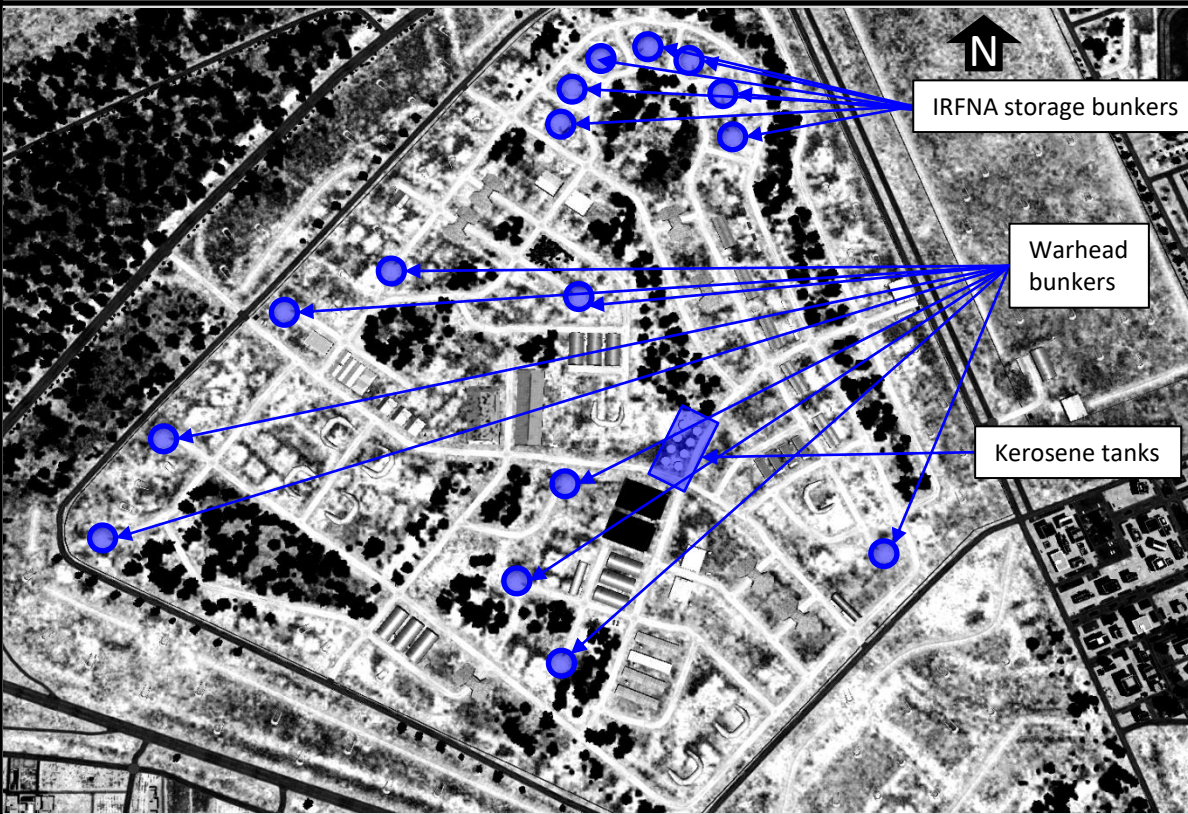

Any 500lbs bomb should be capable of destroying the buildings.

Collateral Damage Concern (CDC)

-CDC 1, Civilian housings, 200m+ from nearest target building.

OPARTGT003, 922nd SCUD regiment base

Warhead and IRFNA bunkers are concrete structures covered with sand.

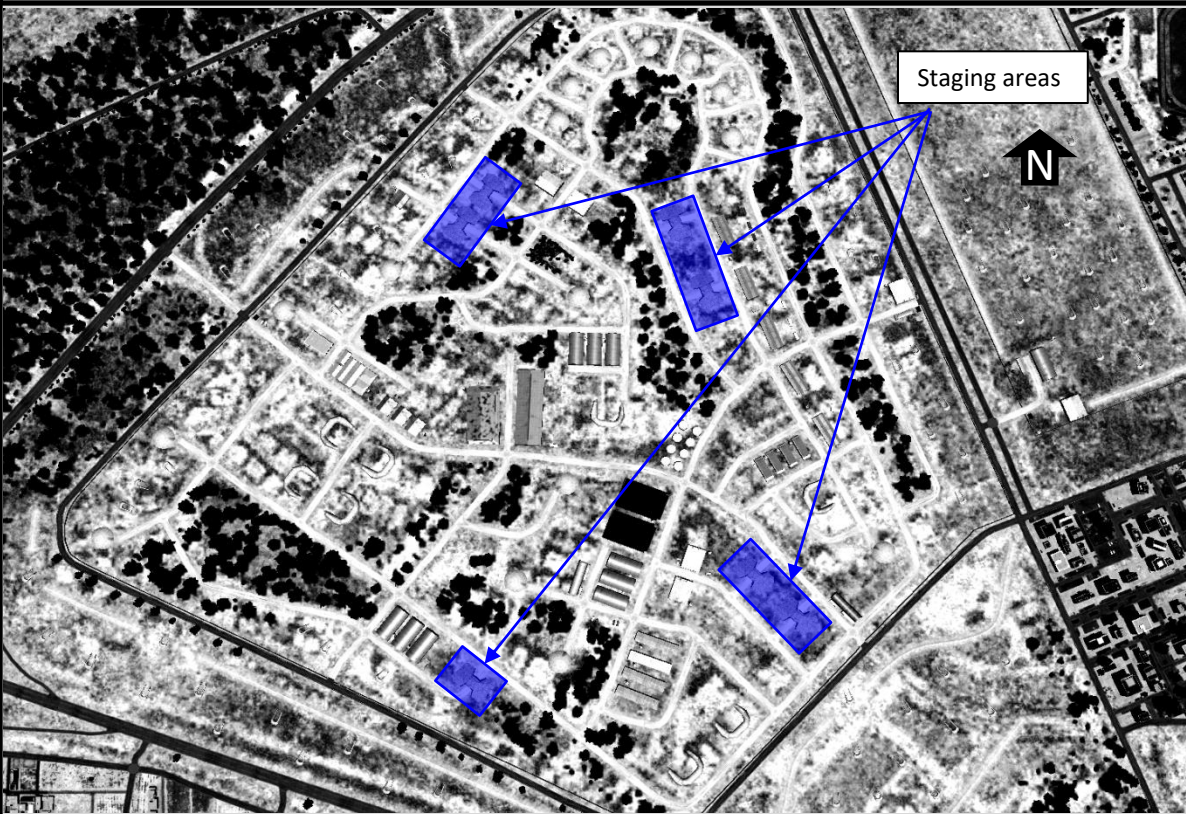

All bunkers to be engaged with penetration capable ordnance, delayed fuzing GBU-31(V)3/B

Kerosene tanks are ordinary liquid tanks made of metal without protection, any 500lbs bomb should be capable of destroying the tanks.

- CDE 1, Civilian housings

OPARTGT003, 922nd SCUD regiment base

Staging areas are used to top-up missiles and perform final inspection before launch.

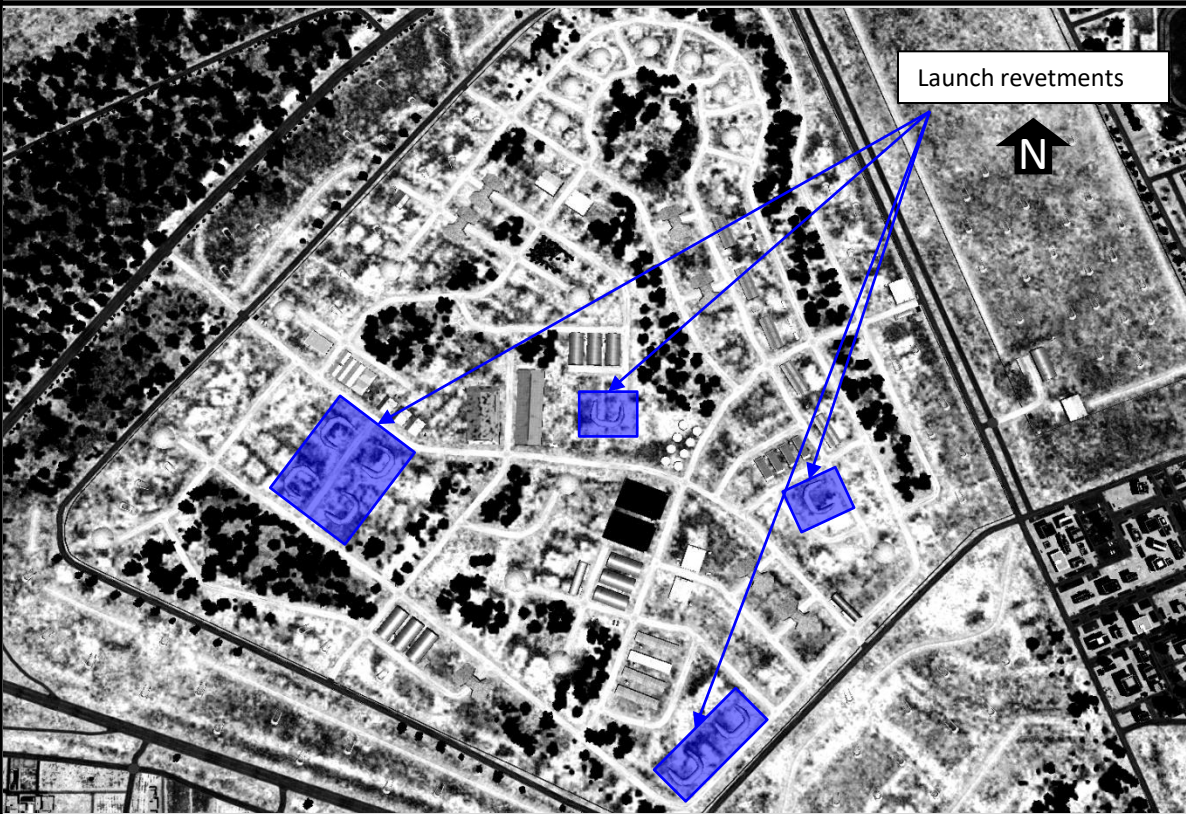

Staging areas are concrete HAS type buildings covered with sand.

All staging areas are to be engaged with penetration capable ordnance, delayed fuzing GBU-31(V)3/B

- CDC 1, Civilian housings

OPARTGT003, 922nd SCUD regiment base

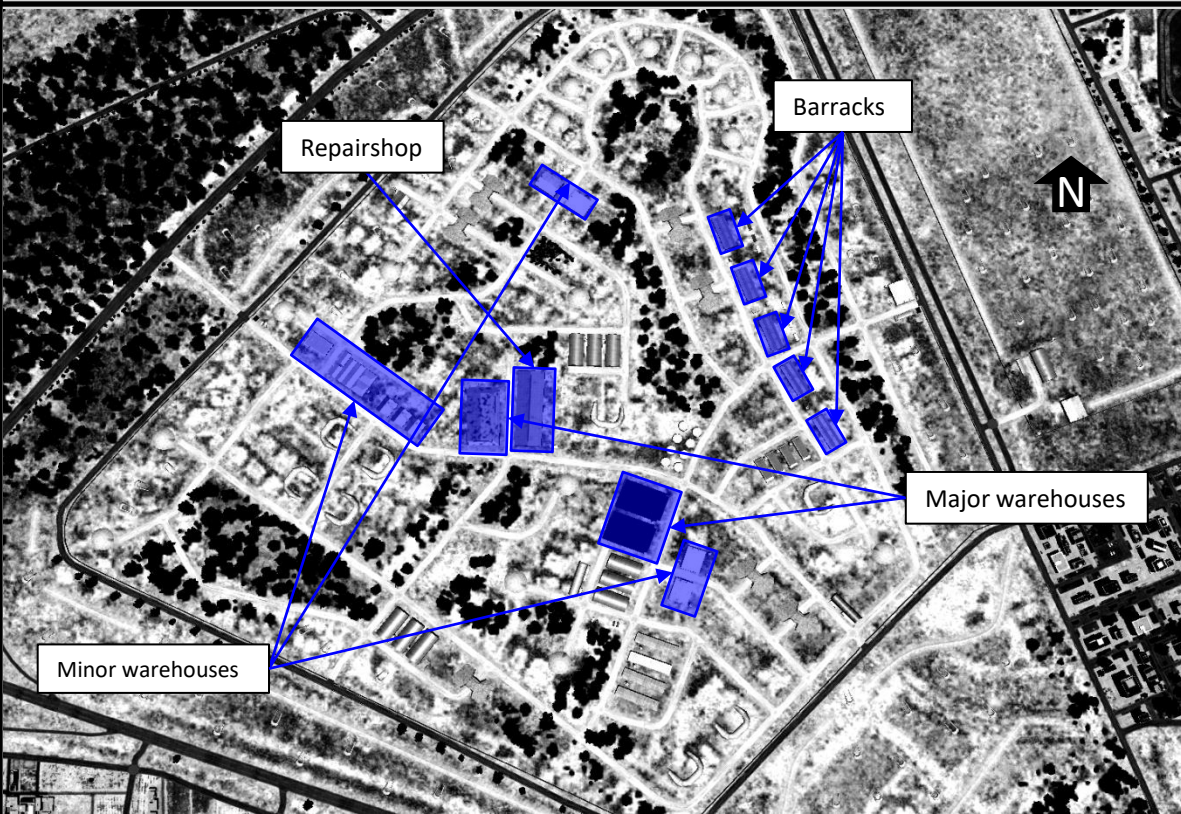

Fixed launch position are in the revetments.
Launching from other locations is very likely when
base is put on a higher alert status.

Revetments, if occupied by a TEL, can be engaged
with any PGW.

- CDE 1, Civilian housings

OPARTGT003, 922nd SCUD regiment base

Barracks houses the operator crews, maintenance personnel and staff.

Repairshop can house a multitude of TEL in various states of readiness or repair

Warehouses store spare parts for both TEL and missile.

Any 500lbs bomb should be capable of destroying any of the buildings.

- CDE 1, Civilian housings
